

# Review of: "Infodynamics, Information Entropy and the Second Law of Thermodynamics"

Hao Fu

**Potential competing interests:** No potential competing interests to declare.

The article clarified the difference between thermodynamic entropy and information entropy, and the previous misconception on the relationship between them. The author criticized the conflation of thermodynamic entropy and information entropy and pointed out the variation in their measurement. The article provided valuable insight into the previous researchers' work. In my view, the opinion from the author is quite novel and would be useful for further study.
