**Potential competing interests:** No potential competing interests to declare.

Here are some comments to improve the article:

1. The article contains numerous grammatical errors and awkward phrasing, making it difficult to follow.
2. The methodology section is not well-structured and lacks detailed explanation.
3. The introduction does not provide enough context about the importance of feature selection in machine learning or the specific challenges associated with high-dimensional datasets in the context of diabetes prediction.
4. There is no in-depth analysis or comparison with other studies or classifiers.
5. The article heavily focuses on the Naive Bayes classifier without adequately justifying why this classifier was chosen over others.
6. Some references cited are outdated.
7. There is redundancy in the explanation of certain concepts, such as the Naive Bayes classifier and the feature selection process.
8. The article's formatting is inconsistent, with varying font sizes and styles.
