

Review of: "Clinical Implications of EMT in HNSCC: A Review of the Factors and Pathways at Play"

Nishi Kant

Potential competing interests: No potential competing interests to declare.

Author has highlighted the major points for the Clinical Implication of EMT in HNSCC, such as **Role in Prognostication, Diagnostic Challenges, Margin Assessment and Mandibular Preservation, Influence on Systemic Therapies, Regulation by Molecular and Epigenetic Pathways.**

- Can you provide specific examples or studies that support each clinical implication mentioned?
- How do the molecular and epigenetic pathways you mentioned specifically impact the clinical outcomes in HNSCC?
