Title: "Analysing the Automation of Artificial Knowledge in Virology for Safety and Effectiveness in Healthcare: Equilibrium of Advancement and Trials for Secure and Productive Health Necessities" Authors: Rani, Manisha, Lakshmi, J., G., Navaneetha, Ch., Nagamani, K.,

General comment:

The present work reviewed the development, challenges, and future of AI application in healthcare and virology globally, aiming at India. The authors pointed out that despite AI's immense potential, a tactical approach is required for a visible impact. This is a timely written review, yet it needs to address quite a few issues as given below:

1. In section 3, write the approach and summarize major findings. Include tables if possible or explain via figures.
2. Include more references in section 4. Find out the questions posed as challenges and answer them via published works.
3. An inadequate number of references were reviewed.

In my opinion, the review is at the very initial stage and requires major revision before publication.
