Potential competing interests: No potential competing interests to declare.

Well-written article. But there are suggestions to improve it below:

1. It is better to give more detailed explanations in the "NMs and their applications" section and to use tables, graphs, or figures to convey information.
2. In the "Water treatment," "Sensors," and "Energy storage" sections, references are not enough. (Only 3, 3, and 1 reference(s), respectively.)
