**Potential competing interests:** No potential competing interests to declare.

Alain Haraux

I am sorry to give this paper a low rating, but since it contains incorrect, crank-like claims, I had no option.

These kinds of incorrect explanations trying to prove SRT inconsistent are very common. However, I was surprised to see the author seems to be a professional, highly cited mathematician.

But then again, I must confess this is the first time I have seen an author issuing these kinds of claims while recognizing that he might be wrong.

Since he seems to be immersed in academics, I suggest that he discuss his doubts about relativity with colleagues who understand it.

Once he understands the logical structure of relativity, he might want to add a new section explaining in his own words the mistakes of his previous explanations, amending his slip, and proving that he is no crank.
