The research is interesting. The manuscript can be accepted for publication with some minor revisions. The following comments would help the authors improve the quality of the paper.

- Some spelling errors and grammatical mistakes in the manuscript need to be corrected.
- Table 5 (spelling errors) needs to be revised.
- The method for cluster analysis was not shown. The authors should add some more details about the principles or parameters used for this method.
- For results and discussions, most detected values were compared with previous studies without discussions. The authors should add some more scientific explanations. These would help readers understand the chemical variation of almond cultivars in different areas.
