Dear authors, first of all, thank you very much for sharing your work. I believe that a review from a more academic perspective is necessary for publication. Sometimes, it seems more like commercial information than an academic explanation of the work. I think it would be very interesting to compare this methodology with those that already exist in the scientific field, analyzing what is new in your field. I also believe that a review of the existing academic literature is necessary.

Best regards, and good luck with the task.
