

# Review of: "Long COVID Syndrome: A Systematic Review of Persistent Symptoms Post-Pandemic"

Ermanno Vitale

**Potential competing interests:** No potential competing interests to declare.

The inclusion criteria mention excluding studies with "samples with specific clinical conditions (comorbidities)." It would be beneficial to specify if this refers to pre-existing conditions before COVID-19 infection or conditions developed as a result of the infection.

The work is well-structured, with a clear aim, methodology, and findings. The abstract succinctly summarizes the research, making it easy to understand the scope and importance of the study. The study addresses a significant and timely issue related to the long-term impacts of COVID-19. By identifying prevalent symptoms and gaps in current research, it contributes valuable insights that can guide future studies and healthcare practice.
