Metastatic Malignant Neoplasm in the Stomach

National Cancer Institute

Source

National Cancer Institute. *Metastatic Malignant Neoplasm in the Stomach*. NCI Thesaurus. Code C95903.

A malignant neoplasm that has spread to the stomach from another organ or system, or from another primary gastric tumor. The primary gastric tumor is not in continuity with the metastatic lesion. Representative examples of metastatic malignant neoplasms to the stomach include breast, lung, and esophageal metastatic carcinomas and melanomas.
