Article may be accepted by addressing following comments:

1. Rewrite abstract, add more value of major results. Add a small conclusion to this study.
2. In the introduction section, add the production of Yemeni almonds.
3. Add the nutritional composition of Yemeni almonds to explore their nutritional properties. Also, add the applications of these nuts in food applications.
4. Method for estimation of mineral content needs to be discussed in brief.
5. Results part needs to be rewritten. Firstly, mention the range of observed values, and also tell about the highest and lowest values. Then compare the results with a previous study. Also discuss the benefits or functions of the evaluation of components. Before starting the phytochemical, add 2-3 lines about the phytochemical to explore basic information about this.
6. Statistics are missing from the tables; add them.
