Potential competing interests: No potential competing interests to declare.

1. Please revise the English grammar and the flow of the language.
2. Statistical packages were used but were not represented in the results. One-way ANOVA and Tukey tests were used, and the P-value was calculated, but none of these was discussed or shown in the results and discussion. You'll need to indicate and represent this in the results.
3. The scientific name of almond should be added as a species, and then the authors can give names to the cultivars as in the article.
4. Voucher specimens' numbers should also be included.
