Potential competing interests: No potential competing interests to declare.

- The title is not covering the scope of the given research and data.
- Revision of the title is required to reflect the objectives of the paper.
- The Abstract should be rewritten and should comprise intro, objectives, results, and conclusions.
- Explain in the introduction why you chose this plant.
- Provide brief details containing backgrounds, composition, consumption, and health benefits of the selected plant.
- Provide proper methodology along with citations and references for the analysis you performed.
- Provide the complete details, such as preparation of plant materials, identification techniques (e.g., HPLC, GC-MS), and assays used for antioxidant activity.
- Interpretation and explanation of results is not properly carried out.
- The current results are not properly correlated to other studies.
