

Review of: "Information Technology for Detecting Fakes and Propaganda Based on Machine Learning and Sentiment Analysis"

Venkateswara Rao Kota

Potential competing interests: ok paper is good. but you can use at least convolutional neural networks

Paper is OK.

- 1. You are using only the basics of machine learning and NLP.
- 2. I am suggested you can use a deep learning technique that is convolutional neural networks.
- 3. It is good for sentiment analysis to predict positive, negative statements.
