Potential competing interests: No potential competing interests to declare.

1. The introduction should be more concise and focused on the research problem and objectives.
2. More recent and relevant references should be included in the literature review.
3. The methodology section needs more details and clarity on experimental procedures and parameters.
4. Comprehensive characterization and analysis of the bioethylene product are lacking.
5. The quality and resolution of some figures could be improved for better clarity.
6. A more thorough comparison with other relevant studies in the field is needed.
7. Information on the replicability and reproducibility of the experiments should be provided.
8. Environmental and economic implications of the proposed process should be discussed in more detail.
9. The conclusions should be more concise and focused on the key findings and contributions.
10. The overall writing and language could be improved for better clarity and coherence.
