Potential competing interests: No potential competing interests to declare.

General Comments: The study conducted has a very practical idea as the issue of population congestion is closely associated with air pollution. Presence of the harmful factors can greatly affect the cognitive abilities of students and may put a financial burden on poor societies like Nigeria. So, in the reviewer's view, the study will provide a base for further research in the field of air pollution.

Suggestions:

Q1. There are no details about the size of the area covered and also the type of sampling technique, either it was random sampling or some systematic approach was followed.

Q2: It would be better to add GPS coordinates and a sampling map to the script.

Q3: It is suggested to show the findings and correlations among the parameters through some statistical means.

Q4: Discussion and conclusion need thorough revision and improvement.
