**Potential competing interests:** No potential competing interests to declare.

This article is salient and focuses on a phenomenon that many people may idealize. I appreciate the exploration, description of need, and topic of interest. My suggestions to continue to strengthen this manuscript include providing added time-relevant in-text citations and parenthetical references, and providing added clarity in the literature portion and methods of this study. Additionally, expanding on the implications and limitations of this study would help its rigor. However, this again was a salient read.
