I am grateful for your contributions to the study of the life of Indigenous communities during the COVID-19 pandemic. The paper is intriguing and contains several significant discoveries. Nevertheless, the authors employed a questionnaire, which is perplexing. A questionnaire is typically not employed in a qualitative study; rather, it is employed in a quantitative study. In the absence of a results section, the manuscript is incomplete. The results and the discussion should be separated into two distinct sections. Additionally, there was a lack of correlation between the theoretical framework and the conceptualization and discussion in numerous instances. I anticipate reviewing a revised section in the near future. I appreciate it.
