

Review of: "The Effects of Polypropylene Wastes on the Compressive Strength of Grade 25 Concrete"

Ahmad Mousa¹

¹ Al-Balqa Applied University

Potential competing interests: No potential competing interests to declare.

- Can you specify how the homogeneity of the mix was assessed and its impact on the results?
- What specific interactions between polypropylene and concrete should the authors investigate further?

Is there any interaction between PP and concrete?

What is the title of the x-axis of the sieve analysis test?

Detailed experimental work should be added.

The equations used to calculate s. gravity, strength, and sieve analysis should be added.

Detailed procedure of the experimental work must be included.

Results and discussions should be more detailed and supported with literature.
