

Review of: "Refrigerant Selection in Air Conditioning Systems Considering Thermodynamic, Environmental, and Economic Performance Using the BHARAT-II Multi-Attribute Decision-Making Method"

Chung-Tai Wu

Potential competing interests: No potential competing interests to declare.

This is an interesting article worthy of publication after revision.

1. There should be an independent section dedicated to Literature Review (inserted between Introduction and Methodology). The proposed decision-making methodology should be based on a comprehensive Literature Review.
2. Pictures of the experimental setup should be provided (schematics also helpful). Steps of the experiment should be detailed, with quantitative data on all parameters.
3. Pertaining to the analysis of the data results, uncertainty analysis should also be provided.
4. In the Conclusions, the authors should address how the results compared with previous studies.
