

Review of: "Evaluation of Ambient Air Quality Levels at Various Locations within Lead City University, Ibadan"

Arti Choudhary

Potential competing interests: No potential competing interests to declare.

Study needs major revision.

Study included too much data. I would suggest plotting the comparative graph of different variables for all locations in one plot.

For example, plot all points (male hostel, female hostel, dumpsite, university campus, Pharma Department, College of Medicine, etc.....n(15)) temp profiles of morning and afternoon in one. Similarly, plot for all the variables, then describe the variation in results and site-specific variation.

Please update the whole manuscript with the above-mentioned variations.
