

Review of: "Revolutionizing Precision Agriculture with Drone-Based Imaging and Fuzzy Intelligent Algorithms"

Xuan-Kien Dang

Potential competing interests: No potential competing interests to declare.

The article's innovations and comparative analysis are presented in a clear and detailed manner. Specific criticisms include the need for clearer distinctions among the article's contributions, a conflict between the mathematical model and practical application descriptions, a lack of comparative analysis in simulations, and several grammar and formatting difficulties. Recommendations include improving language quality, enhancing readability by reducing unnecessary equation numbering, better organization, clarification of contributions, detailed discussion on the difficulty of problems, justification for assumptions, discussion on control parameters' impacts, and expanded experimental verification.
