Potential competing interests: No potential competing interests to declare.

Such a great write-up. Exciting to read and eye-opening as you have touched on an aspect of society people often do not pay attention to. However, I noticed a single-word contraction in the entire article, and I think it should be fixed (**that's**). I would have also loved to see some graphical representations and data from the colorimetric and spectrophotometric tests mentioned in the results and discussion.
