

Review of: "A Description of the Melting of Ice With the Modified Clapeyron–Clausius Equation"

Nitu Singh

Potential competing interests: No potential competing interests to declare.

- 1- According to my view, a good paper and interesting manuscript title, but suggests the need to add some parts to the literature review.
- 2- The author should write and explain more about the Clapeyron–Clausius Equation.
- 3- The author should add Modified Clapeyron–Clausius equations graphs in the conclusion and results parts of the manuscript.

After resolving the above comments, I agree to accept the paper.
