Very well written and organized. The literature review is well structured. In the introduction (or maybe at the end of the theoretical framework section), I'd suggest clearly mentioning the research question(s) and/or study objectives.

I have one small comment and was curious why you chose to select both real GDP and real GDP per capita in this time-series analysis. I suspect it might lead to some "hidden" multi-collinearity, although that's not my main concern since it looks like you ran all the data validity tests, so that improves its overall credibility. Consider testing just these two control variables together to see if they are affecting each other in a specific pattern.

Other than that, I think this looks good to go. Thanks for your work!
