

# Review of: "On the Vapour Pressure Over Three-Component Solutions"

Jacob Nagler

**Potential competing interests:** No potential competing interests to declare.

The paper "On the Vapour Pressure Over Three-Component Solutions" is well written, and the equations developed are very interesting.

However, the author should complete the following remarks:

1. Add an introduction with an updated references list and discussion.
2. Provide an illustrative numerical example of 3D vapour pressure comparison with the relevant literature.
3. Update the conclusion section.
