Potential competing interests: No potential competing interests to declare.

This is a well-written article about a significant problem in healthcare: the use of TEE during CPR.

I suggest perhaps creating a graph or figure that schematically depicts your goals for the Kern Six-Step Model for teaching TEE in EPs. You can convert Figure 2 to a graph to enable readers' understanding; as of now, it is more of a wall of text instead of a figure.

For example, use colored text boxes and arrows to indicate the process.

You could also alter Figure 3 to be easier to understand, e.g., divide the questions into "sections" representing different aspects of the survey.
