In this manuscript entitled "**Teeth Whitening: Optimization with Violet LEDs**" (Manuscript ID: Qeios ID: 3M0AFQ), I think it's better to discuss the below questions. Therefore, I suggest a revision for the manuscript before publication.

Comments:

1. Abstract: should present numerical results.
2. Experimental: should be extended. For example, the methodology, etc., should be extended.
3. Results and Discussion: should be extended.
4. The authors should explain the importance and novelty of the work with more details.
5. A comparison table should be added to show the novelty of the work.
6. The English language should be checked. For example, shorter sentences should be used, and etc.
7. Conclusions: should be supported by data.
