Dear Authors, The research work is good and is focused on an important issue. However, in order to improve the quality of research, following are my suggestions:

1. The introduction section should be revised and made better with more details by focusing on the formulation of the research question. The organisation of the research paper is very poor. Please make it well organised and sound.
2. Try to highlight the novelty by revolving the introduction around the research question with existing proof of work.
3. Try to maintain the standard format of a research paper, which includes sections like Introduction, research methodology and case description, results and discussion, and conclusion and recommendation.
4. Mention limitations, assumptions, and future work in the manuscript.3. Work done is okay, but the article needs to be restructured.
5. Check for errors, grammar, spelling, etc...
6. Check all equations properly.
