Dear authors

Thanks for your valuable manuscript,

I read it and have some questions

1-in your inclusion criteria, you mentioned the $Q_{max} > 15$?? I think it should be changed to $Q_{max} < 15$

2-your exclusion criteria, you should exclude patient with urethral stricture, because patient with urethral stricture have lower Q_{max} and this may interfere with your results

3- you mentioned in method section that prostate volume was evaluated before and after intervention but you did not report prostate volume after intervention in your result section

4- you said that your study is the largest real world data!! but in your discussion you reviewed a study with more participants, how do you explain this?

5- your introduction should be summerise
