Potential competing interests: No potential competing interests to declare.

The manuscript with the title "Comparison of extended irreversible thermodynamics and nonequilibrium statistical operator method with thermodynamics based on a distribution containing the first-passage time" is good, however have several things need to revise.

1. Please standardize in terms of writing the word nonequilibrium or want to use non-equilibrium.
2. Abstract is good but need to write clearly on the output of the study.
3. The novelty of the study needs to explain details in the end of section Introduction.
4. Please numbering all the equation.
5. Standardize on writing exp or e.
6. I cannot see the proven part in manuscript.
7. Please use the current references as the citation at least 5 years ago.
