**Potential competing interests:** No potential competing interests to declare.

The "Global Burden and Evolving Understanding of Hepatitis E Virus" mini-review summarizes the main characteristics of HEV biology and epidemiology. However, it lacks novelty since there are several brief reviews of similar characteristics.

There are some repetitive sections like HEV pathogenicity and clinical presentation. I suggest authors structure the manuscript in a more organized way and include more recent references.

Also, the HEV taxonomy classification should be updated according to ICTV.
