

# Review of: "Evaluation of Chemical Content and Phytochemical Composition of Yemeni Almond Cultivars"

Hülya Özler

**Potential competing interests:** No potential competing interests to declare.

I appreciate the researchers for their work. The study shows important results for Yemeni almond cultivars. Researchers should make recommendations based on their study results. Some minor errors are shown in the PDF file. References must be written in accordance with your journal rules. There are spelling errors in the writing of many references. The manuscript can be published after necessary corrections and improvements mentioned in the text. I wish success to the researchers.
