**Potential competing interests:** No potential competing interests to declare.

The research focuses on the evaluation of ambient air quality levels at various locations within Lead City University, Ibadan. The topic is quite interesting. However, major issues should be considered as follows:

1. Authors should focus on the main objective of this research. In 1.2, the objective section should be organised and minimised.
2. The introduction part of the research should be linked to each other.
3. In 2.3, authors make a table for selective quality parameters.
4. The data set represented in the table might be mentioned in the text.
5. Mention 'x' and 'y' axis labels for all the figures.
6. The format of the manuscript is bad. The author should check carefully; there is a lot of space on some pages. It looks like a research proposal, not a research article. This is a main concern.
