Potential competing interests: No potential competing interests to declare.

1. The paragraphs in the introduction are too long. Each could be divided into two paragraphs.
2. It should be mentioned how to obtain total carbohydrate and yield in the method section.
3. The authors mentioned one-way ANOVA and Tukey test in the statistical analysis. The results of ANOVA and Tukey test should be mentioned first in the results before comparing the values among the groups. The discussion should be based on the ANOVA/Tukey test.
4. Cluster analysis should be mentioned in the statistical analysis (method).
5. Please discuss the cluster analysis results with the earlier findings with regard to almond cultivars.
