Potential competing interests: No potential competing interests to declare.

First, I would like to congratulate the authors for their work.

My comment is as follows:

In general, the article supports the findings of previous publications and the importance of correcting the factors that lead to diabetic nephropathy.

There are a few repetitions in the introduction that need to be taken care of, especially paragraphs 5&9.

I wonder why the authors decided to use the C-G GFR equation instead of other, more accurate ones such as EPI or MDRD, which could have detected more patients with DN (see KDIGO guidelines for e.GFR).
