Abstract

This dialogue introduces *type nihilism* and *token realism* about the meaning of life.

Osamu Kiritani

Ph.D., Clinical and Academic Research Promotion Center, Tokyo Women's Medical University, 8-1 Kawada-cho, Shinjuku-ku, Tokyo 162-8666, Japan. Email: osamu.kiritani@gmail.com

Plato: Forms, essences, are those without which things would not exist as they are (see, e.g., Plato, 387-377/1998).

Aristotle: Ends are a kind of essences. Artifacts derive their ends from creators, whereas natural things do not get their ends from anything external to them (Aristotle, 348-330/2004).

Descartes: God is a supremely perfect being, therefore God cannot but exist. (Descartes, 1641/2017).

Pascal: Even if reason cannot determine the existence of God, there is nothing to lose by betting on the existence of God, and rather, the meaning of life increases (Pascal, 1670/1995).

Nietzsche: God is dead. Our existence (action, suffering, willing, feeling) has no meaning (Nietzsche, 1882/1974, 1901/1967).

Heidegger: We humans, unlike many other things, are the only beings that determine the meaning of existence. While we determine the meaning of other things' existence, what then determines the meaning of our own existence? The meaning of our existence can only be determined by ourselves (Heidegger, 1927/2010).

Sartre: We are condemned to be free, since we have no essence before our existence because there is no Creator. We can act without being determined by anything but ourselves (Sartre, 1946/2007).

Kiritani: We are not condemned to be free. We are supposed to survive and reproduce. The heart is supposed to pump blood, since it has been selected for doing so by natural selection. Likewise, we are supposed to survive and reproduce, since our survival and reproduction have led to our perpetuation. Thus, the meaning of life is survival and reproduction.

Even if we do not or cannot reproduce, the meaning of life can be survival (Kiritani, 2012).

Wittgenstein: Is the riddle of life solved by the fact that we survive forever? Is this eternal life not as much of a riddle as our present life? The solution of the riddle of life in space and time lies *outside* space and time (Wittgenstein, 1922/1998).

Kiritani: The solution of the riddle of life lies *inside* space and time. Let us distinguish between *types* (abstract concepts) and *tokens* (individual instances). From the point of view of type, there is no meaning of life. We eat or have sex for survival or reproduction. But for what do we survive or reproduce? Life has no meaning from the viewpoint of type. However, from the point of view of token, there is a meaning of life. We survive now for our survival in the future. We reproduce for our children's reproduction. Life has a meaning from the viewpoint of token. The former is *type nihilism*, while the latter is *token realism* about the meaning of life.
