Potential competing interests: No potential competing interests to declare.

The research topic is current and important; however, some facts were observed:

The bibliographic review needs to be updated with more recent articles.

The objective of the study was to analyze only the compressive strength of the concrete, but it could have carried out other analyses such as water absorption, concrete permeability, and splitting tensile strength. If you still have concrete samples, you can carry out these analyses.

As for the discussion of results, it needs to be improved and compared with other authors.
