Potential competing interests: No potential competing interests to declare.

The review is clearly structured with distinct sections, making it easy to follow. Each section logically builds on the previous one, maintaining a coherent flow of information. While comprehensive, the review could benefit from a deeper analysis of certain aspects, such as the specific challenges in developing and deploying the HEV vaccine globally, or a more detailed comparison of HEV with other hepatitis viruses.

Overall, the review is well-written, detailed, and provides a thorough examination of the Hepatitis E virus, making it a valuable resource for understanding the epidemiology, pathogenicity, and prevention of HEV.
