**Potential competing interests:** No potential competing interests to declare.

The term "Quantum Jump" is very confusing since the details of the experiments point to the phenomenon called "Quantum Tunneling. In addition, there are no explanations and details regarding the performed experiments, such as the light source used, photos of the observations, and so on. I think that the current version of the manuscript is far from being scientific and doesn't merit publication. The authors should especially focus on the term "Quantum Jump" and research works related to quantum tunneling.
