Potential competing interests: No potential competing interests to declare.

The review titled "Effects of Cinnamon on Cancer Prevention and Progression" is a commendable effort to summarize the impact of cinnamon on cancer.

The article provides valuable insights into the beneficial aspects of cinnamon, but I recommend that the authors thoroughly review the manuscript to correct grammatical errors, such as sentence merging, for better clarity.

However, the 'Introduction' section should begin with the role of cinnamon in cancer, rather than its effects on gastrointestinal discomfort, given the review's focus on cancer.

Incorporating figures to illustrate the possible factor pathways and the roles of signaling molecules and bioactive compounds in cinnamon would also enhance understanding.

Overall, this is a comprehensive review of the role of cinnamon in cancer, significantly contributing to the existing literature.
