Potential competing interests: No potential competing interests to declare.

I appreciate the authors for drafting this paper on IPLS and the proposed actions. As everyone was seriously looking at the SLR in climate change scenarios, hardly a few looked at the land oscillations and their reasons which accelerate the SLR conditions. This draft proposes to bring the researchers working in the field of land subsidence and many outreach activities to emphasize the importance of this topic. The merging of IPLS results with the IPCC is worth proposing, and the detailed strategy to execute this is missing. Overall, the manuscript has good intentions to study land subsidence and spread its importance and awareness. I wish the authors good luck.
