**Potential competing interests:** No potential competing interests to declare.

1. The novelty of the proposed method is not clear.
2. In the proposed method, authors have claimed to select the number of features from 8 to 6 and then to 4, etc. However, it is not clear how the attributes are selected.
3. Details about the Pima Indian Type II Diabetes dataset used in the article are not available in the article.
4. Authors have just used a Naive Bayes classifier for classification, which doesn't have any novelty.
5. Results presented in figure 4 are not clear.
