Dear Editors,

The authors need to address the following.

1. Kindly improve the Introduction part, as it needs to address how this index is different from other scales.
2. Inclusion and exclusion criteria are not mentioned.
3. Authors addressed the each question in detail, but its importance in the Discussion is missing. For example, need to interpret these results and their clinical significance.
4. Authors only mentioned results, but methodology and discussion aspects are completely missing.
