Potential competing interests: No potential competing interests to declare.

The following points must be taken into consideration:

- The manuscript must have many grammar mistakes and poor Academic English language, and it must be reviewed by a specialist.
- All tests that were reported should be referenced.
- The paper should attach experiment pictures.
- The researcher should clarify the mixture design (including a table to present the content of materials), compressive strength, slump, and water absorption.
- Sieve analysis for the coarse aggregates is not included despite what was mentioned in the text.

The compressive strength should be developed and explained in a better manner.
