

Review of: "Protection of Complex Network Systems From Targeted Attacks and Non-Target Lesions"

Jean Paul Niyoyita¹

¹ University of Rwanda

Potential competing interests: No potential competing interests to declare.

1. The current research status is needed in order to help the reader know how far the topic has been researched.
2. No scientific solution to the problem: The author has focused on the problem to solve, but the solution has never been clearly explained.
3. In the conclusion section, the author should also highlight the future work.
4. Avoid being so emotional while mentioning the Russia-Ukraine war. I really understand how the conflict has affected the author. However, this paper should be a scientific work rather than a judgment report.
