

# Review of: "Nanomaterials: History, Production, Properties, Applications, and Toxicities"

Mohammad Perwez<sup>1</sup>

<sup>1</sup> Jamia Millia Islamia

**Potential competing interests:** No potential competing interests to declare.

1) In section 3, recent references need to be added in sections on water treatment, catalysis, sensors, and energy storage.

2) Need to add more figures and tables to illustrate the previous work done in this regard. A figure should be inserted in f) section on photocatalysis. In section 4, a diagrammatic illustration of the impacts of nanomaterials on the environment should be provided.

3) Similar review articles are already available. I don't find any novelty in the articles.
