

Review of: "Unlocking Complexity: The Versatility of Substrate Modulation Equations in Enzyme Analysis"

Gabriela L. Schmitz

Potential competing interests: No potential competing interests to declare.

This is a very interesting topic for enzymatic research. However, the work performed by the researcher is not clear. I suggest the author should explain more about the meaning and the alterations made in the equation, justifying them to clarify it for readers. A way to perform this is to use an example both for the traditional equation and for the derivative one.

I'm not sure the math is appropriate either.
