# E-cigarette atomiser resistance

Addiction Ontology

## Source

*Addiction Ontology*

**Definition:** An e-cigarette atomiser quality that is the opposition of its circuit to the flow of current in that circuit.

**Informal definition:** The electrical resistance of an e-cigarette atomiser which affects how hot it gets when used and therefore how much vapour it produces.

*This definition was imported from the Addiction Ontology (see <https://addictovocab.org/>). Comments and suggestions for improvements are welcome using the Qeios review system.*

*Definitions imported from the Addiction Ontology (AddictO) are what are known as ‘ontological definitions’. See this article in Qeios for an explanation <https://www.qeios.com/read/YGIF9B>.*

*Ontological definitions can sometimes be hard to read. In those cases we also include an informal definition.*

*Definitions also often require elaboration to make it clear how they should be used and what they include. In those cases we include a comment.*

*Also, definitions sometimes require an explanation as to how they came about to help users understand how they relate to alternative definitions. In those cases we include a curator note.*
