Potential competing interests: No potential competing interests to declare.

1. The research gap being explored
2. The introduction is too brief to include recent related studies and their references.
3. The soil and geologic maps at a 1:250,000 scale appear to be too large.
4. I recommend removing Figure 13.
5. Recommendations for the future should also be included.
6. Some of the references are outdated. Consequently, the researcher should consider including more recent references.
